Dear Sirs,

I would like to thank you for allowing Mr. Luis Alvarado to represent ICE and WSMR at our most recent Electrical Engineering seminar at Tech.

The talk on “A Model-Based Design for the WSMR Ground Vehicle Target Control System” was well received by senior students and faculty. Mr. Alvarado’s talk was interesting and timely for senior students who have recently embarked on a design capstone project. I am sure students appreciated a talk on Control Systems, and hopefully with this talk, they realized the need for the different phases of a real-life project (SOW, PDR, CDR), which are topics covered in our senior design course.

Your support for our program is greatly appreciated!

Best Regards,

Héctor Erives, PhD, PE
Assistant Professor
New Mexico Institute of Mining and Technology
